Summary

I am a front-end focused developer with hands-on experience building responsive websites, UI/UX-driven digital experiences, and full-stack applications. Skilled in React, JavaScript, Python, SQL, with additional experience in AI-related technologies and data-driven projects. I am passionate about creating intuitive digital experiences and applying technology to solve problems for businesses.

Education

The University of New South Wales
• Master of Information Technology

Sydney, NSW
Sep 2023 - Sep 2025

Southeast University Chengxian College
• Bachelor of Financial Management

Nanjing, China
Sep 2013 - Jun 2017

Work Experience

Precision Vintage Watches, Australia | Web Developer & Digital Designer Nov 2025 - Present

- Collaborated with the founder to define business requirements and deliver a luxury-inspired vintage watch platform focused on usability, product storytelling, and responsive experiences across devices.
- Led the end-to-end website lifecycle, including UI/UX design, front-end development, testing and deployment, ensuring a seamless user experience across desktop and mobile devices.
- Built reusable components and a modular front-end structure (driven by React, JavaScript, HTML, CSS, and CMS) to improve maintainability and support future feature expansion.
- Implemented key customer-facing features including multi-criteria filtering, global search, interactive image galleries, responsive product pages, and enquiry workflows to improve product discovery and engagement.
- Developed a structured CMS workflow that enables efficient product management, content updates, and inventory presentation, allowing non-technical stakeholders to maintain the platform with minimal developer intervention.

Industrial Bank Co. Ltd, Suzhou, China | Data Analyst Jul 2017 - May 2023

- Leveraged SQL and Advanced Excel to extract, clean, and model large-scale banking datasets; performed customer segmentation and portfolio performance tracking to deliver actionable business insights.
- Developed automated data monitoring workflows and interactive reporting dashboards, transforming raw transaction and loan/deposit balances into key performance metrics for senior management.
- Orchestrated predictive risk analytics initiatives, including portfolio stress testing, customer risk profiling, and early-warning trend analysis using statistical methods to mitigate lending risks.
- Translated complex risk indicators and lending metrics into intuitive executive summaries and data visualisations to align corporate strategy and drive data-backed operational decision-making.

Relevant Projects

Full Stack Project | UNSW Final Year Project

Automated Report Generator

- Designed and developed a cross-platform Automated Report Generator using React, Electron, and Python (FastAPI), allowing users to upload CSV, Excel and JSON documents and generating visual reporting automatically.
- Implemented JWT-based authentication and encrypted local storage for secure user access and data protection.

- Enabled interactive visual dashboards using Matplotlib with automated PDF generation and SMTP-based email sharing functionality to streamline data-driven decision-making.

Dead Tree Detection using Aerial Imagery | UNSW Computer Vision Program

- Evaluated and compared various computer vision methods for dead tree detection based on multi-channel aerial imagery (by developing and optimizing YOLOv7, U-Net, and Mask R-CNN models in PyTorch), determine the solution best suited for environmental monitoring applications.
- Delivered comprehensive data cleansing and augmentation on the dataset to enhance the robustness of the model.
- Built an end-to-end evaluation process for rigorous error analysis and model optimization, identifying the best-performing architecture through metric tracking.

AI-driven Social Media Engagement Analysis | UNSW Data Analysis Project

- Integrated Google Vision API and OpenCV to extract visual features from images, performing feature engineering to build a structured dataset that enabled the identification of key factors influencing social media engagement.
- Applied advanced regression models (OLS, Poisson, and Negative Binomial) to evaluate factors influencing social media engagement and analyse relationships between content features and metrics.
- Identified key engagement drivers (e.g., inclusive and community-oriented content) to deliver data-driven insights and actionable recommendations for content strategy optimisation.

Skills

Front-end & Web Development:	React, JavaScript (ES6+), HTML5, CSS3, Responsive Web Design, REST APIs, Component-based UI Development
UI/UX & Digital Design:	Figma, UI/UX Design, Wireframing, Design Systems, Mobile-first Design, Ecommerce UX
Backend & CMS:	FastAPI, Flask, Sanity CMS, Form Handling
Tools & Workflow:	Git/GitHub, Jira
Programming & Data:	Python, SQL (MySQL), Pandas, NumPy, Statistical Analysis
Computer Vision & AI:	YOLOv7, U-Net, Mask R-CNN, Google Vision API, Image Segmentation, Object Detection, Data Augmentation, Model Evaluation
Languages:	English (proficient, IELTS 7.0), Mandarin (native)
