Summary

I am an IT graduate with experience in front-end development, UI/UX-focused web design, and data-driven applications, combining technical skills with a background in financial data analysis. I am skilled in React, JavaScript, Python, SQL, and AI-related technologies, with hands-on experience building responsive web platforms, computer vision projects, and analytics solutions. I am passionate about creating intuitive digital experiences and applying technology to solve problems for businesses.

Education

The University of New South Wales	Sydney, NSW
• Master of Information Technology	Sep 2023 - Sep 2025
Southeast University Chengxian College	Nanjing, China
• Bachelor of Financial Management	Sep 2013 - Jun 2017

Work Experience

Precision Vintage Watches, Australia | Web Developer & Digital Designer Nov 2025 - Present

- Developed and maintained a responsive, component-based vintage watch marketplace using React and JavaScript; implemented intuitive front-end interactions and streamlined back-end/CMS integrations to maximise scalability.
- Delivered an optimised e-commerce experience by developing responsive product pages, multi-criteria filtering, and interactive image galleries, while managing structured CMS content workflows and live data updates.
- Led website UI/UX design and visual direction, focusing on minimalist ecommerce experience, luxury-inspired branding, responsive usability, and product storytelling.
- Supported day-to-day platform and ecommerce operations including product photography, image editing, product uploads, content updates, inventory presentation, website maintenance, and customer inquiry management.

Industrial Bank Co. Ltd, Suzhou, China | Data Analyst Jul 2017 - May 2023

- Leveraged SQL and Advanced Excel to extract, clean, and model large-scale banking datasets; performed customer segmentation and portfolio performance tracking to deliver actionable business insights.
- Developed automated data monitoring workflows and interactive reporting dashboards, transforming raw transaction and loan/deposit balances into key performance metrics for senior management.
- Orchestrated predictive risk analytics initiatives, including portfolio stress testing, customer risk profiling, and early-warning trend analysis using statistical methods to mitigate lending risks.
- Translated complex risk indicators and lending metrics into intuitive executive summaries and data visualisations to align corporate strategy and drive data-backed operational decision-making.

Relevant Projects

Full Stack Project | UNSW Final Year Project

Automated Report Generator

- Designed and developed a cross-platform Automated Report Generator using React, Electron, and Python (FastAPI), allowing users to upload CSV, Excel, and JSON documents and generating visual reporting automatically.
- Implemented JWT-based authentication and encrypted local storage for secure user access and data protection..

- Enabled interactive visual dashboards using Matplotlib with automated PDF generation and SMTP-based email sharing functionality to streamline data-driven decision-making.

AI-driven Social Media Engagement Analysis | UNSW Data Analysis Project

- Integrated Google Vision API and OpenCV to extract visual features from images, performing feature engineering to build a structured dataset that enabled the identification of key factors influencing social media engagement.
- Applied advanced regression models (OLS, Poisson, and Negative Binomial) to evaluate factors influencing social media engagement and analyse relationships between content features and metrics.
- Identified key engagement drivers (e.g., inclusive and community-oriented content) to deliver data-driven insights and actionable recommendations for content strategy optimisation.

Dead Tree Detection using Aerial Imagery | UNSW Computer Vision Program

- Evaluated and compared multiple computer vision approaches for dead tree detection from multi-channel aerial imagery by developing and optimising YOLOv7, U-Net, and Mask R-CNN models in PyTorch, identifying the most effective solution for environmental monitoring applications.
- Processed, curated, and augmented a 444-image multi-channel (RGB + NIR) dataset, performing comprehensive data cleaning and preprocessing to enhance model robustness.
- Built end-to-end evaluation pipelines to perform rigorous error analysis and model optimisation, identifying YOLOv7 + SimAM as the top-performing architecture via metric tracking (mIoU, F1-score, mAP).

Skills

Front-end & Web Development:	React, JavaScript (ES6+), HTML5, CSS3, Responsive Web Design, Bootstrap, Webflow, REST APIs, AJAX, Component-based UI Development
UI/UX & Digital Design:	Responsive Design, User Interface Design, User Experience Design, Wireframing, Design Systems, Mobile-first Design, Ecommerce UX
Backend & CMS:	FastAPI, Flask, Sanity CMS, Webflow CMS, Dynamic Content Management, Form Handling
Programming & Data:	Python, SQL (MySQL), Pandas, NumPy, Data Analysis, Feature Engineering, Statistical Analysis
Computer Vision & AI:	YOLOv7, U-Net, Mask R-CNN, OpenCV, Google Vision API, Image Segmentation, Object Detection, Data Augmentation, Model Evaluation
Languages:	English (proficient, IELTS 7.0), Mandarin (native)
